# **bringing** correctional media

into the 21st century

secure media systems

The Inmate Music and Media Program has been designed and developed using input from hundreds of correctional administrators, inmates, and security specialists. The Secure Media music player, the SEC-100, is the only portable media player designed and manufactured specifically for use in corrections. This patented device provides inmates with access to a library of over three million songs and does not require access to a computer, the Internet, or anything else that could pose a security risk. At the heart of the security program is our team of world-class experts in the disciplines of software engineering, hardware design, and correctional security. This platform will integrate into any existing canteen or commissary program and requires NO CAPITAL COST to get started.

downloading music and media

Downloading music has never been easier or more secure. First, inmates will search for their favorite songs using the SEC-100's integrated library feature. With the push of a button, songs are queued for download. When ready to download the songs, the inmate simply connects the SEC-100 to a Secure Media access point (*Secure Music Station*®) which can be housed in an existing kiosk or accessed through a Secure Media Systems kiosk. Once connected, the Secure Media system will recognize the device and immediately begin downloading music.

program highlights

Security is the most important aspect of this program. The SEC-100 is NOT a consumer MP3 player that has been cosmetically altered to be "corrections friendly." In contrast, the SEC-100 is one part of a highly secure music and media delivery platform that has been created specifically for the corrections industry. Correctional security experts agree that this is the most secure music program ever developed. Conceived specifically for corrections, this program will:

❖ Easily integrate into your existing canteen or commissary operation
❖ Capture revenue, trends, and statistics from your music program
❖ Vastly improve the security of your music program over cassettes and CDs
❖ Provide music downloads in a fully secure environment with no access to a computer or the Internet
❖ Support department initiatives like reentry and anger management using meditation recordings, audio books, and educational files
❖ Reduce the administrative costs and workload of your current cassette and/or CD music program with this streamlined delivery platform
❖ Reduce property and improve the safety of the prisoners and correctional staff (device size: 3.2"L x 2.2"H x .4"W)
❖ Remove the environmental burden of alkaline battery disposal
❖ Introduce a positive, time consuming leisure activity that will improve the lives and attitudes of your inmates

Step 1: Browse Library

Step 2: Pick Songs

Step 3: Connect and Download
